

STATE OF NORTH CAROLINA, DEPARTMENT OF ADMINISTRATION		
DIVISION OF PURCHASE AND CONTRACT		
116 West Jones Street, Raleigh, NC 27603-8002		
Term Contract	465B	Defibrillators, External
Effective Dates	December 10, 2010 Through November 30, 2012	
Bid Number	201001201	
Administrator	Marilyn Wall	
Phone	(919) 807-4529	
Fax	(919) 807-4509	
E-Mail	marilyn.wall@doa.nc.gov	
Last Updated	May 21, 2012	

1. General Information

The scope of this contract is limited to External Automatic, Semi-Automatic and Manual Defibrillators, including parts and accessories. Contract pricing is based on line item pricing for defibrillators with additional discounts in unit pricing for increased quantities of defibrillators. Pricing for optional equipment, accessories, and supplies will be a percentage discount for the current manufacturers suggested retail price list (M.S.R.P.).

Defibrillator Configurations:

This contract is set up to offer various defibrillator configurations for its intended use. Contact the Contractor to provide help with any configurations and contract pricing for the brand of defibrillator that you are trying to configure. All defibrillators and products to be used for configurations must be listed on contract or listed in the awarded manufacturer's price list.

Line item pricing for each Manufacturer's defibrillators is listed beside the specified quantity listed. Additional products may be purchased from the specified Manufacturer's price list, with the listed discount offered by the Contractor listed at the bottom of each defibrillator column.

Types of Defibrillators

Automatic Defibrillators (AED) are lightweight, defibrillator units that are powered by microprocessors. A computerized voice instructs the operator to place two electrodes/pads on the patient's chest. The device analyzes the heart rhythm and decides if a shock is necessary. The microprocessor will not permit the device to deliver a shock unless it detects the presence of a heart rhythm that requires defibrillation. These devices are traditionally used by emergency medical personnel, but AED training programs are being implemented to train lay personnel in the use of.

Semi-Automatic Defibrillators are manual defibrillators/monitors that provides therapeutic and diagnostic functions but can be converted to an Automatic External Defibrillator (AED) with the use of an optional Shock Advisory Adapter. In the AED mode the Shock advisory System advises the operator when it detects a shockable rhythm and requires user interaction in order to deliver a defibrillation. The manual mode features a simple manual 1-2-3 operation. As a monitor the display may allow 1, 2, or 3 ECG channels to be viewed simultaneously or a cascading ECG, heart rate, oxygen saturation and other vital patient information. The design of the unit provides ease of use and the flexibility to add new features and enhancements that can be used for both out of the hospital and hospital users. Traditionally used by Emergency Medical Technicians (EMT), Advanced Life Support (ALS), Basic Life Support (BLS) and other emergency medical personnel in the AED mode and EMT-Paramedics who are trained to interpret arrhythmias and determine when a shock is needed.

Manual Defibrillators are defibrillators/monitors that provides therapeutic and diagnostic functions. Traditionally used by emergency trained medical personnel in Critical Care Units, Intensive Care Units and Operating Rooms as well as EMT-Paramedics in the pre-hospital setting. Unit may be used as an ECG bedside monitor. Documents date/time, heart rate, instrument status and critical shock parameters. Offers preset patient alarms, measures SpO2 as part of patient monitoring.

Term Contract No. **465BBB**

Defibrillator Information

Sudden Cardiac Death (SCD), known as cardiac arrest, is the abrupt loss of heart function resulting in the inadequate delivery of oxygenated blood to the body. The result is instant collapse and death. SCD is due, most commonly, to an electrical conduction abnormality in the heart resulting in an irregular heart rhythm (arrhythmia called Ventricular Fibrillation (VF). This is the most prominent medical emergency in the United States today, claiming 300,000 lives annually.

Ventricular Fibrillation (VF) is a chaotic, quivering of the heart muscle. This results in a loss of normal heart function and inadequate circulation of oxygenated blood. Defibrillation reverses the chaotic quivering of the heart (VF).

Defibrillation is accomplished through the discharge of an electrical shock which serves to interrupt the chaotic, irregular electrical impulse and allow the normal heart rhythm to regenerate. Defibrillation is the only effective therapy followed by cardio pulmonary resuscitation (CPR). When CPR is performed immediately and defibrillation initiated within 1-3 minutes the survival rate may approach 70-80%. For each minute delay in defibrillation, the survival rate decreases by 7-10%. The medical device capable of discharging an electrical current to reverse VF is called an Automated External Defibrillator (AED).

Automatic External Defibrillators (AEDs) are lightweight, affordable, user-friendly defibrillator units that are powered by microprocessors. Once power is generated, a computerized voice instructs the operator to place two electrodes/pads on the patient's chest. The device analyzes the heart rhythm and decides if a shock is necessary. The AED is preprogrammed with multiple safeguards and warnings prior to any discharge. The microprocessor will not permit the device to deliver a shock unless it detects the presence of a heart rhythm that requires defibrillation. Automatic External Defibrillators are traditionally used by emergency medical personnel. A program is being implemented to make AEDs more accessible to first responders and the lay public called PAD.

Biphasic waveforms are used with the new AEDs. Biphasic waveforms deliver energy in two phases. First, the current passes through the heart, then the current reverses direction and passes through the heart a second time instead of high energy monophasic waveforms (200j to 360j) that travel in one direction through the patient's heart. Because of this two way application of energy, biphasic waveform can deliver effective, lifesaving shock therapy at a much lower dose of non-escalating energy (150j). When lower energy doses are administered there is less resultant dysfunction such as asystole, heat block and cardiac pump malfunction, so the patient suffers fewer side effects.

Public Access Defibrillation (PAD): The American Heart Association is helping businesses and other facilities establish public access defibrillation programs to reduce the time to perform defibrillation and improve the cardiac arrest survival rate. To meet the need for lay rescuer training, the AHA has developed a course called **Heartsaver AED for Lay Rescuers and First Responders**. This course prepares lay rescuers, including non-traditional first responders such as police, firefighters, airline personnel, security guards, senior care facility worker and other lay people to perform the essential CPR skills and to use an AED. Other certified training organizations such as The American Red Cross and Emergency Medical Services (EMS), offer layperson AED certified training. **For more information about the PAD program contact The American Heart Association at 1-800-242-8721 or visit their web site at www.americanheart.org.**

Anyone expected to use an AED should receive certified training on how to use the AED and CPR.

The Federal Drug Administration (FDA) requires a physician's prescription to purchase an AED. Prescriptions to purchase an AED in North Carolina must be signed by a physician licensed in North Carolina.

Defibrillators should remain registered with the FDA and the County Emergency Medical Services (EMS) Offices for the life of the unit. This is a requirement that creates a medical device tracking system for product modifications, notifications and recalls.

Term Contract No. 465BBB

The emergency steps that are to be taken when a responder is faced with this cardiac situation is called The Chain of Survival. The Chain Of Survival is:

1. Early call for 911
2. Early CPR
3. Early access to AEDs
4. Early access to advanced cardiac care at a hospital setting.

AED Selection for PAD Program

(Public Access Defibrillation Programs In State And Federal Facilities)

1. Device must have FDA market clearance.
2. Device is acceptable to the American Heart Association.
3. Device has a memory of its use.
4. Device has the capability to download use records.
5. Device is easy to use

Guidelines to purchase an AED

1. Contact manufacturer's representatives and request information.
2. Select devices that seem to meet the needs of your facility and contact sales representative to demonstrate and answer questions about the device.
3. Review the features of the AED unit, the warranties, service contract and liability coverage and quantity pricing.

Guidelines for Placement of AEDs in Your Facility

1. Place AEDs in central locations near a telephone where they can be easily accessed.
2. Place AEDs so any victim can be reached in less than three minutes.
3. Place AEDs close to the person(s) trained to respond to an emergency.
4. Notify everyone of all the AED locations.
5. When placing AEDs, consider whether trained rescuers will have to use more than one elevator. If so, locating AEDs at different levels may make access more convenient.

The use of this equipment is made in reference to the North Carolina General Statutes, Section 1, Article 1B of Chapter 90-21.15. **Emergency treatment using automated external defibrillator; immunity.**

This information has been compiled from written materials of various resources such as defibrillator manufacturers, The American Heart Association and Emergency Management Training materials.

2. Scope of Contract

This contract is intended to cover the State's normal requirements of defibrillators for North and South Carolina. For use by all State agencies, departments, institutions, and public school units (except those exempted by statute) and some non-state agencies.

3. Taxes

Prices or Discounts shown herein do not include any North Carolina sales or use taxes.

4. Abnormal Quantities

Any agency requirement that exceeds 25 or more units must be forwarded to the Division of Purchase and Contract for processing. The Division, at its sole discretion, may process any such requirement in one of the following ways:

1. Purchase may be authorized at the current level of pricing with the current contract vendor(s)
2. Additional discounts from the current level of pricing may be negotiated with the current contract vendor(s)
3. A separate Invitation for Bids may be issued for the requirement

5. Minimum Orders

This contract will be for a minimum order of **\$100.00** for any single order. Agencies are authorized to purchase from best available sources on orders less than this minimum order value. This provision shall not be used by an agency to circumvent the intent of the contract. If an agency elects to place an order for less than the minimum order value, and the contractor elects to accept such order, then transportation charges will be prepaid and added to the invoice.

6. Placement of Orders

Orders will be placed throughout the contract period on an as-needed basis for the quantity required at the time, and will be issued directly to the respective contractor(s) or their designated suppliers that are listed on this contract.

Contract changes, if any, over the life of the contract are implemented by contract addenda released by the Contract Administrator to the contractor. If the contractor is accepting orders and/or delivering through other parties, for example a manufacturer accepting orders and delivering through a dealer network or dealers receiving orders through a network of other dealers, then it is the responsibility of the contractor to apprise such parties of all such contract addenda.

7. Delivery

The Contractors are to furnish, deliver and train personnel in the use of defibrillators. The contractor(s) will complete delivery **within (30) consecutive calendar days** after receipt of purchase order. In the event the delivery is not received within the contract delivery period, the contractor may be held in default in accordance with paragraph 1, DEFAULT AND PERFORMANCE BOND in the North Carolina General Contract Terms and Conditions, and the state may procure the articles or services from other sources and hold the contractor responsible for excess cost occasioned thereby.

8. Transportation Charges

All goods shall be delivered FOB DESTINATION when the "order value" is **\$100.00** or more, when shipped to a single destination. Orders to a single destination that total less than this "order value" should be shipped prepaid, with transportation charges added to the invoice as a separate item. Transportation charges invoiced for orders equal to or more than this "order value" may be cause for removal of the contractor from the contract.

NOTE: If the contractor makes partial shipments of an order equal to or more than this "order value" to one destination, all shipments of the order shall be sent FOB DESTINATION with **NO** additional transportation charges added. **Note!** All shipments should be inspected for damage immediately upon receipt.

9. Services

VENDOR SUPPLIED TRAINING: Training will be provided immediately following delivery and/or installation. (Any additional training must be performed, at the agency's request, within fourteen (14) days of notifying the vendor during the first year of operation. This training is to be provided at no charge.

10. Item Pricing Information

All defibrillators, products and accessories listed in the Manufacturer's price list dated on this contract will also be listed in the Eprocurement System.

Click on the following link to access the Eprocurement system for pricing **PUBLIC VIEW**

For additional information there are two links available on the Public View page that may help: **General Search Tutorial** and **Searching Techniques**. With the advanced search, you may search by keyword, commodity code, price and supplier.

Repair service is provided via Depot Repair at Zoll Corporate in Chelmsford, MA to diagnose equipment problems. Call the Technical Support Help Desk, Monday through Friday from 8:30 AM to 6:00 PM EST. Emergency Technical Support is available 7 days a week during the hours not covered during a normal business day. Daily Technical Support and Emergency Support are available by calling 1-800-348-9011.

The Technical Support Help Desk Representative will troubleshoot the issue and obtain minimal information to open a Service Request. If needed, a Service Loaner is available at no charge during the repair analysis process and is shipped to arrive before 10 AM the next business day.

13. Warranty

The contractor guarantees items offered to be free from any and all defects in material, packaging, and workmanship and agrees to replace defective items promptly at no charge to the State, for a period of the applied manufacturer's warranty. Warranty information listed with each defibrillator unit.

If the manufacturer's standard warranty exceeds the above warranty time period, then the manufacturer's warranty will continue to apply for the full, extended time period.

14. Substitutions

Substitutions are not permitted without prior approval of the Division of Purchase and Contract. Failure of the contractor to comply with this requirement may result in the removal of the contractor from the contract.

15. Reporting Requirements

In accordance with General Statute 90-21.15 sellers of an AED must notify the North Carolina Office of Emergency Medical Services of each sale of an AED. Reporting information should include the type and model of the AED, date of sale of the AED, location of the AED (e.g. address and building name where applicable), and the name, address and telephone number of the person who is responsible for the AED. Reporting information should be sent via email to Ed Browning at ed.browning@dhhs.nc.gov, or by regular mail to "AED Coordinator", North Carolina Office of EMS, 2707 Mail Service Center, Raleigh, NC 27699-2707 within two weeks of the sale date of the AED. Questions regarding the AED reporting requirements should be addressed to Ed Browning at the North Carolina Office of EMS at (919) 855-3941.

16. Vendor Complaint Form

Download the vendor complaint form, be specific in outlining the problems or complaints and send a copy to the Division of Purchase and Contract for processing. If the vendor is found not to be in compliance with the contracts terms and conditions, the vendor may be deleted from our vendor registration system and/or your future proposals not being considered, or removal from a contract.
